

Stick It Up In A Second... Stop Rust For A Year!

#91112 12/Master

#91321 12/Master

#91016 12/Master

High-Margin, High-Tech solution, protects for one year.

It Really Works: Simply stick a Bull Frog Rust Blocker Emitter in any enclosed space where there is metal. Bull Frog Rust Blocker Emitters contain metal-seeking VCIs that will migrate throughout the space to form an invisible "Molecular Umbrella" of electrochemical inhibitors that seal metals against the air and moisture that cause rust and corrosion. VCIs automatically protect any metal surfaces that air can reach, even through paint and other coatings.

Bull Frog VCIs bond electrochemically with metal surfaces to form a protective "Molecular Umbrella," sealing out the air and moisture that cause rust and corrosion.

VCI Products were developed for, and are used by, major industries, the Military and NATO.

- Works better than conventional rust inhibitors, yet is environmentally and user safe
- No nitrites, silicones, phosphates, heavy metals or harmful chemicals
- Won't harm plastics, elastomers or painted surfaces
- Has no effect on electrical, mechanical or chemical performance and no chemical build-up
- Each emitter protects for a full year
- Works even under extreme conditions
